SMARTree Software

Header

Feature	Option
Title	Yes
Editable	Yes
Lockable	Yes
Logic	No
Plot	No
Options	None

Description

Header elements are used to organize a SMARTree. These elements have few attributes but aid in structuring the SMARTree so that users can easily understand creator intent.

Details

Header elements serve as a method of bundling elements for tree creation using drag and drop operations. A header is typically used as a top level element that describes the contents of a subtree. A header has no content information and the only editable entry is the header title.

- **Logic Conditions**

- Child conditions are good

- Child Elements have logic conditions
  that are not satisfied
