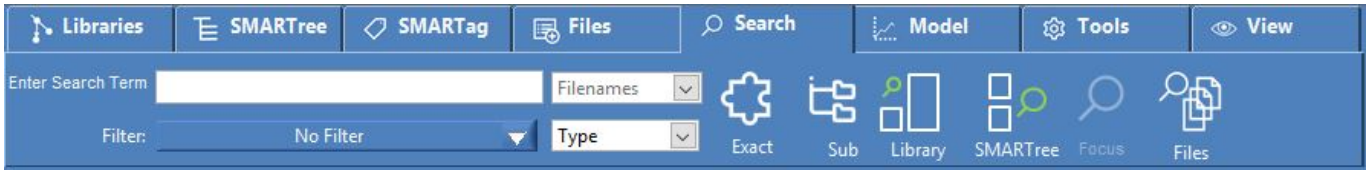
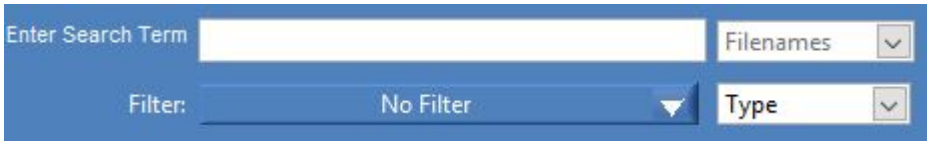
Search Ribbon



The Search ribbon is used search your libraries for content including filenames, SMART Tags or element data. The user can also search the SMARTree editor for content and search multiple files to search and replace content.



Search

Enter search term in the string box. You can filter the search by filename, SMART Tag, Filename & SMART Tag, Elements or Filter list. You can also filter the element search

by type, value, modified, owner or element

Exact

Exact Match Option. Only return exact matches, not partial string.

Sub

Show child elements in element search results. If you wish to just show the elements matching the search term then ensure this function is on.

Library

Search Library Option. Ensure that your library is searched. Turn this off if you only wish to search your SMARTree only.

SMARTree

Search SMARTree Option. Ensure that your smartree is searched. Turn this off if you only wish to search your Libraries only.

Focus

Focus Option. Focus on search results within the SMARTree editor.

Files

Advanced Search and Replace Module. Opens the advanced search and replace module to search all your library items for element data. Also includes advanced replace features to conduct bulk operations on your libraries.
